DETAILED ACTION

Allowable Subject Matter

1. Claims 1-13 are allowed.
2. The following is an examiner's statement of reasons for allowance.

Morishita et al. disclose the construction of a control device for a vehicular AC generator, comprising:

a field current switching circuit unit having a switching transistor for performing switching control of current conducted to a field coil;

a switching transistor control circuit unit for performing intermittent control of the switching transistor based on a battery voltage and a predetermined target voltage;

an internal electric source circuit unit that uses electricity supplied from a battery to form an internal electric source voltage, the internal electric source voltage supplied to the switching transistor control circuit unit; and

a battery voltage supplying terminal that supplies electricity to the internal electric source circuit unit from the battery via an internal electric source line.

Kojima teach the construction of a casing which can containing at least one IC or a switching transistor control circuit unit which is mold-sealed by resin, an inductance element mounted in series to the IG ON detection line, and a magnetic body mounted to an electric source line or terminal wherein the terminal and the magnetic body are fixed to the casing for the purpose of providing an electrical connector having a ferrite element mounted in proximity of the terminals.

The prior art of record, taken alone or in combination, fails to teach the construction of a control device for a vehicular AC generator as disclosed on independent claim 1, having:

a magnetic body, which is fixed to a casing, and mounted to the internal electric source line or the battery voltage supply terminal, also fixed to the casing, and the internal electric source line or the battery voltage supply terminal is equipped with only the magnetic body; and

on independent claim 2, having:

an inductance element connected in series to the internal electric source lines, wherein the battery voltage supply terminal and the inductance element are fixed to the casing, and the internal electric source line is equipped with only the inductance element.

3. Dependent claims 3-13 are considered allowable by their respective dependence on allowed independent claims 1 and 2.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.

5. This application is in condition for allowance except for the following formal matters:
Non-elected claims 14-22 have not been cancelled.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
